PROFILE

UX Designer and Design Strategist with a BCom in Statistics and practical experience across product design, UX research and enterprise discovery. I combine qualitative research, usability thinking and quantitative analysis to turn complex problems into clear product and experience decisions. My work includes fintech concept design, rewards experiences, stakeholder research for a Tier 1 African bank and strategic design work at UluntuXD, moving from research and synthesis through flows, prototyping and high fidelity design in Figma.

EXPERIENCE

Design Strategist | UluntuXD | September 2026 – Present

- Contribute to design strategy across client and internal initiatives, connecting research insights, business objectives and user needs to shape clearer experience opportunities.
- Translate research and discovery findings into strategic recommendations, experience principles and design direction that teams can use to make product and service decisions.
- Collaborate with designers, developers and stakeholders across discovery, ideation, workshops and concept development, helping move work from ambiguous problems toward structured design responses.

SELECTED UX PROJECTS

Enterprise API Ecosystem Research | UX Researcher | Team of 7 | Tier 1 African Bank (NDA)

- Worked within a seven-person research team investigating barriers to API discoverability, reuse and cross team collaboration across a large internal developer ecosystem.
- Designed the stakeholder interview protocol and independently led 9 of 16 interviews with solution architects, developers, designers and executives.
- Led affinity mapping and contributed to a cross functional ideation workshop, turning interview data into six evidence-based themes that informed leadership discussions.
- Co developed a machine to organism reframe that shifted the proposed response from a tooling only solution toward an operating model that also considered culture, incentives and collaboration.

Velocity Rewards | MVP Concept | Individual Contributor | Figma

- Designed a petrol retail rewards experience for Johannesburg motorists, reframing a card based, low visibility loyalty journey into a cashless, card agnostic experience with integrated digital tipping.
- Conducted a structured competitive audit across six fuel retail and banking loyalty programmes, including Sasol, BP, Engen, Discovery Vitality, eBucks and Tappy, to identify patterns in reward visibility, flexibility and redemption.
- Translated research into three behavioural archetypes and four product hypotheses covering reward visibility, card agnostic earning, cash withdrawal and in journey tipping, with clear criteria for prioritising the MVP.
- Scoped the MVP around four core behaviours and defined a success model focused on repeat engagement and meaningful reward use rather than sign-ups alone.
- Designed 32 end to end Figma screens covering onboarding, rewards tracking, redemption, withdrawal and digital tipping, supported by a consistent visual design system.

RISE | Real Income, Steady Earnings | Individual Contributor | Fintech Design Exploration

- Explored the financial pressure experienced by first time young earners in South Africa, using national youth unemployment and financial wellbeing research to frame the opportunity space.
- Synthesised research into a composite persona and mapped a recurring behavioural loop from payday to fixed obligations, financial pressure and lack of a safety net, identifying where product intervention could create the most value.
- Defined five product decisions, including a protected Buffer balance, predictive low balance warnings and a judgement free help channel, and documented the conventional banking patterns considered and rejected.
- Designed the onboarding, home and alerting experience in Figma with a calm visual and interaction system intended to reduce cognitive load and support more confident money decisions.

SKILLS

UX Research and Strategy:

User Interviews, Usability Testing, Heuristic Reviews, Affinity Mapping, Research Synthesis, Stakeholder Research

Product and Interaction Design:

User Flows, Information Architecture, Wireframing, Prototyping, High Fidelity UI, Interaction Design, Design Systems

Tools and Analysis:

Figma, Microsoft Office, R, Basic SQL, Power BI (Basic), Quantitative and Qualitative Analysis

Ways of Working:

Design Thinking, Human Centred Design, Agile and Waterfall, Workshop Facilitation, Presentation and Collaboration

UX/UI TRAINING

UX/UI Design Program | UluntuXD | Completed August 2026

Completed practical end to end UX training covering user research, synthesis, wireframing, prototyping, usability testing and interface design through real world briefs in Figma.

EDUCATION

Bachelor of Commerce, Statistics | Nelson Mandela University | 2022 – 2025

Relevant coursework: Advanced Data Analysis, Time Series Analysis, Financial and Strategic Management. Built strong analytical and quantitative reasoning skills applicable to user research and data informed design.
